

Environmental Education and Sustainability (314301)					
Assignment					
Sr.No.	Questions	option a	option b	option c	option d
Unit - III Ecosystem & Biodiversity					
1	The food chain in the ecosystem helps to maintain	The feeding relationship in nature, thus biodiversity	Flow of energy in the ecosystem	Passage of nutrients in the ecosystem	All of the above
2	Detritivores, Carnivores and Herbivores are part of	Food chain	World	Ecosystem	None of the above
3	In ____ Food chain, Dead organic matter is serves as principal energy input.	Detritus	Flowing	Original	None of the above
4	Ecological pyramid is _____ in shape.	Circular	Triangular	Oval	None of the above
5	Tadoba national park is in	Gujrat	Maharashtra	MP	UP
6	The red data book maintains a record of	plants and animals present in the whole world	relationship between man and biosphere	plants and animals which are known to be endangered	forest world world
7	Which of the following statement is correct for India?	India is a 7th largest country in world with megadiversity	India has no rank in world related to biodiversity	India is the third largest country in Asia with megadiversity	Option d is correct
8	Which of the following has largest desert of India?	Kutchchh	West coast	Nico bars	none of the above
9	Which of the river plains extend up to Himalayan foot hills?	The gangetic plains	Punjab plains	Brahmaputra plain	None of the above
10	Which of the following place (s) receive maximum rainfall in India?	The north-east India	Non Himalayan hills	Cheerapunji in the north-east India	None of the above
11	Which of the following is considered to be major threat to global Biodiversity?	Genetically modified species	Global warming	Pollination	None of the above
12	The Hailey National park established in 1935 was renamed as,	Jim Corbett national park	Sundarban national park	Kanha national park	None of the above
13	Morphin is a _____use of biodiversity.	Chemical	Physical	Medicinal	Mechanical
14	The term Alpha diversity refer to	Genetic diversity	Community and ecosystem diversity	Species diversity	Diversity of plants
15	Which term describes organisms that make their own food using sunlight?	Consumer	Decomposer	Heterotrophs	Producers
16	Which of these is a characteristic of a pond ecosystem?	Presence of only aqatic plants	Presence of only aqatic animals	Presence of both aquatic plants and animals	None of the above

17	Which of the following is an example of an abiotic factor in the functioning of an ecosystem?	Plants.	animals	Temperature	Fungi
18	In a grassland ecosystem, which organisms would you expect to find at the highest trophic level?	Carnivores like hawks	Frog	Snake	Grass
19	Given a local community's reliance on forest resources, how could you balance conservation and livelihoods?	By promoting unsustainable logging practices to maximize short-term profits	Involving the community in sustainable resource management and conservation initiatives	By restricting all use of forest resources, even for essential needs	By encouraging sustainable use of forest resources, even for essential needs
20	Given that climate change is affecting species in India, what role can biodiversity assessments play in managing this impact?	They can identify species that need immediate relocation to other regions	They can identify vulnerable species and prioritize conservation efforts	They focus solely on the economic value of species to boost tourism	They emphasize the ecological value of species for climate resilience and biodiversity conservation
21	How can agricultural practices be modified to reduce their negative impact on biodiversity?	By focusing solely on monoculture farming for higher yields	By practicing agroforestry and crop rotation to maintain soil health and biodiversity	By using chemical fertilizers and pesticides to increase crop production	By conserving natural habitats and promoting organic farming practices
22	How can conservation efforts help mitigate biodiversity loss?	By promoting urbanization to create more living spaces for humans	By reducing habitat destruction and restoring ecosystems to support diverse species	By focusing on increasing agricultural land at the expense of natural habitats	By limiting urbanization and protecting natural habitats, focusing on sustainable development
23	How can SWOT analysis be applied to manage tourism in biodiversity hotspots in India?	By focusing only on the strengths of the tourism industry and ignoring environmental impacts	By balancing tourism development with conservation efforts and community participation	By restricting tourism completely to prevent any impact on biodiversity	By promoting sustainable tourism practices that maximize economic benefits without compromising ecological integrity
24	How can the State Biodiversity Boards assist in the effective implementation of the Biological Diversity Act, 2002?	By monitoring the activities of local communities only	By ensuring that biodiversity management plans are created and enforced at the local level	By restricting access to biological resources without any legal framework	By promoting sustainable use of biological resources and enforcing legal frameworks for biodiversity conservation
25	How does eco-tourism benefit biodiversity hotspots in India?	By contributing funds for conservation while promoting awareness about local ecosystems.	B) By encouraging large-scale industrial development in biodiversity hotspots	By promoting hunting and resource extraction to boost the economy	None of the above
26	The India Biodiversity Portal provides information about	Species and ecosystems found in India	Species and ecosystems found in America	Species and ecosystems found in Asia	Species found in all the above regions
27	The term "bio-piracy" refers to?	The illegal exploitation of biological resources	The legal exploitation of biological resources	Both A and B	None of the above
28	The term "biodiversity hotspot" was introduced by which organization?	CPCB	SPCB	Conservation International	None of the above
29	What are the three levels of biodiversity?	Genetic	Species	Ecosystem	Genetic, species, and ecosystem
30	What does biodiversity refer to?	The variety of life forms in a particular area	The similarity of life forms in a particular area	The variety of plants	The variety of animals
31	What does the term "Biodiversity Hotspot" refer to in India?	An area of desert	An area with a high level of biodiversity and significant threat to it	An area of animals	None of the above

32	What does the term "sustainable development" mean in relation to biodiversity conservation?	Present development by any way	Future development	Development that meets current needs without compromising the ability of future generations to meet their own needs	None of the above
33	What is the importance of the National Wildlife Action Plan (NWAP)?	It sets out a comprehensive strategy for wildlife conservation and habitat protection	It does not sets for protection strategy	It deals with only developement of industries	All of the above
34	What is the main cause of biodiversity loss today?	Industries	Aforestation	Ecotourism	Human activities, deforestation, pollution
35	What is the main opportunity identified in the SWOT analysis for the conservation of the Western Ghats?	Creating awareness	Increasing eco-tourism and protecting local biodiversity	Deforestation	Both A and B
36	What is the main source of energy for ecosystems on Earth?	Fossil fuel	Tidal energy	Ocean energy	Solar energy
37	What is the most effective way to preserve an endangered species' natural habitat?	Establish protected areas and regulate land use around the habitat	Animal hunting	Deforestation	All of the above
38	What is the role of zoos and botanical gardens in biodiversity conservation?	They protect plant species only	They assist in the breeding and preservation of endangered species	They protect animal species only	None of the above
39	Which act was introduced by the Government of India to protect biodiversity?	Biological Diversity Act, 2002	Environmental act	Wildlife protection act	None of the above
40	Which law in India provides for the protection of wildlife and their habitats?	Biological Diversity Act, 2002	Wildlife Protection Act, 1972	Environmental protection act	All of the above
41	Which of the following is a biodiversity hotspot in India?	Desert	Western Ghats & Himalayas	Forest	Deccan Plateau
42	Which of the following is a component of species diversity?	The Biomass energy	The number of plants in area	The number of individual species in a given area	None of the above
43	Which of the following is a strength of the Western Ghats biodiversity hotspot?	Endangerd species	Invasive species	An area of animals	High species diversity
44	Which of the following is an example of a decomposer in an ecosystem?	Fungus	Grass	Frog	Snake
45	Which of the following is NOT a benefit of biodiversity?	Pollination	Giving clean air	Water purification	Increase in soil fertility
46	Which of the following is the main objective of biodiversity conservation?	To maintain ecosystem balance and ensure sustainability	Does not maintain ecosystem balance and ensure sustainability	Deforestation	All of the above
47	Which organization is responsible for the implementation of the National Biodiversity Action Plan (NBAP)?	Ministry of current affair	Ministry of finance	Ministry of Environment, Forest and Climate Change	None of the above
48	Why is energy flow important in an ecosystem?	It supports the survival of organisms at various trophic levels	It does not support survival of life	It supports deforestation	None of the above
49	Why is a SWOT analysis useful in assessing biodiversity hotspots?	It helps identify the internal and external factors affecting conservation and management	It does not helps identify the internal and external factors	It helps identify the various agro products	None of the above

50	What is a primary threat to biodiversity in the Eastern Himalayas hotspot?	Overexploitation of resources	Aforestation	Overgrazing	None of
----	--	--------------------------------------	--------------	-------------	---------

Unit - IV Environmental Pollution

1	AQI stands for _____	Air Quality Information	Atmosphere Quality Information	Atmospheric Quality Index	Air Qua
2	_____ is an air pollutant which is present in vehicular emissions.	Ozone	Carbon Monoxide	Carbon Dioxide	Sulphur
3	PUC certificate for a vehicle means that which of the following pollutants are within permissible limits	NO2 and CO2	CO and HC	SO2 and CO	None of
4	The yellowing of Taj Mahal is due to	Ageing	Air Pollution	Water Pollution	None of
5	Aerosols cause _____	Air Pollution	Land Pollution	Water Pollution	None of
6	_____ converts toxic gases and air pollutants in exhaust to less toxic pollutants	Pollution converter	Exhaust converter	Catalytic converter	Gas con
7	Industry is _____ source of air pollution.	Point	Line	Area	None of
8	_____ is a primary air pollutant.	CO	Smog	Ozone	None of
9	_____ is a secondary air pollutant.	Oxides of sulphur	Smog	VOCs	Oxides s
10	VOC stands for	Volatile Organic Components	Volcanic Organic Components	Volcanic Organic Compounds	Volatile Compon
11	Reactive, flammable, corrosive and toxic are characteristics of _____ waste.	Non-hazardous	Domastic	Hazardous	All of th
12	Which of the following are likely to be present in a photochemical smog?	Sulphur dioxide	Sulphur	CFC	Ozone
13	Which of the following devices is suitable for the removal of gaseous pollutants?	clarifier mechanisam	Aerators	Filter	Wet scr
14	Excess fluoride in drinking water is likely to cause _____	Blue baby syndrome	Fluorosis	Change in taste and odour	Intestin
15	Which of the following is a non-point source of water pollution?	Factories	Sewage treatment plants	Urban and suburban lands	All of th

16	Disease caused by eating fish inhabiting mercury contaminated water is _____	Bright's disease	Hiroshima episode	Mina-mata disease	Ostesclerosis
17	Sound becomes hazardous noise pollution at decibel above ____	80	100	30	120
18	Lead enters the atmosphere as a particulate pollutant. This is a problem because it _____	is a precious metal and it is being lost in the atmosphere	will cause the ozone hole to increase	causes central nervous system malfunction in humans	causes eutrophication in waterways
19	Photochemical fog differs from industrial smog in that it _____	is formed in the presence of sunlight	has large quantities of soot	consists of primary pollutants	is primarily composed of CO
20	Particulate matter dispersed as aerosols _____	included nitrogen oxides	may cause damage to respiratory tissues when inhaled	binds with haemoglobin preventing its binding to oxygen	interacts with surface receptors in humans causing irritation
21	Incomplete burning of petrol or diesel in vehicles creates _____ gas which is very poisonous.	Carbon dioxide	Carbon monoxide	Methane	Ozone
22	The diseases cholera, typhoid and jaundice are due to pollution of ____.	air	water	food items	solid wastes
23	DDT is a _____	greenhouse gas	non-degradable pollutant	degradable pollutant	none of these
24	Domestic wastes which can be decomposed under natural processes are called _____ pollutants which are relatively harmless.	Industrial	Thermal	Biodegradable	Non-biodegradable
25	Eutrophication causes decrease in _____	dissolved hydrogen	dissolved salts	dissolved oxygen	all of these
26	Eutrophication is often seen in _____	Fresh water lakes	Mountains	Deserts	none of these
27	Fish die in water polluted by sewage due to _____	Pathogens	Reduction in O₂	Clogging of gills with silt	Foul smell
28	Possible health effects of noise pollution include _____	hearing loss	hair loss	tinnitus	all of these
29	Prolonged exposure to any sound louder than ____dB can cause hearing loss.	10	60	85	130

30	Peroxy-acetyl nitrate(PAN) is formed by the reaction of two primary pollutant, namely nitrogen oxide and _____ released from motor vehicle in the presence of sunlight.	hydro-neutron	hydro-carbon	water-carbons	SO ₂
31	The man-made pollution, such as industrial pollution etc are called as	anthropogenic	anti-anthropogenic	semi-anthropogenic	natural
32	The smaller particles such as dust, smoke etc. which remain suspended for a long period in the air are _____.	Settleable particles	Suspended particles	Gaseous pollutants	Micro P
33	The most serious environmental effect posed by hazardous wastes is	air pollution	contamination of groundwater	increased use of land for landfills	destruct
34	The stage at which biological processes are used to purify water in a wastewater treatment plant is called	secondary sewage treatment	primary sewage treatment	wastewater reduction	biochem
35	An accidental discharge of petroleum in oceans is called _____.	oil leak	oil spill	oil waste	oil loss
36	Water having DO content below ____ is considered to be highly polluted.	4.0 mg/L	8.0 mg/L	11.2 mg/L	0.1 mg/L
37	Water contaminated by cadmium can cause _____ disease.	Itai itai	La la	Minamata	Sasu
38	Increase in concentration of soluble salts in the soil is called _____.	soilification	soluble-soil	salination	desalina
39	Noise level beyond ____dB can cause physical discomfort.	1120	50	120	200
40	The pollutants in air which appear in solid and liquid state are referred to as	Foam	Frame	Particulate pollutant	None of
41	Normal human ear can detect sounds ranging between _____.	0-150 dB	0-140 dB	0-120 dB	0-100 d
42	Which of the following is a source of household noise?	mixer	loudspeaker	washing machine	all of th
43	The noise at construction sites is not due to which of the following?	vibrators	pneumatic hammers	pavement breakers	sirens

44	Noise pollution leads to a) hearing impairment b) increase in efficiency Which of the statement is true?	a is true and b is false	a is false and b is true	both are true	both are
45	_____ is not an effect of noise pollution on the environment.	damage to buildings	poor quality of crops	both a and b	only a
46	Regular maintenance of vehicles results in	reducing noise pollution	increasing noise pollution	no effect on noise pollution	none of
47	Normal level of sound tolerance is _____.	60 dB	70 dB	80 dB	90 dB
48	The Noise Act 1996 states that the loud music from a party should either be turned off or reduced by ____ PM.	9	10	11	12
49	To prevent noise pollution _____ should be installed around hospitals.	high walls	low walls	sound barriers	none of
50	Which of the following is a subsurface source of water?	Rivers	Springs	Wells	Lakes
51	_____ is not a method of water conservation.	rainwater harvesting	construction of bunds	reusing greywater	using sh
52	The process to remove pathogens from water is called _____.	filtration	sedimentation	aeration	disinfect
53	Methods of disinfection are _____.	boiling	adding Potassium Permanganate	chlorination	all of th
54	_____ is known as the Water Man of India.	Anna Hazare	Sunderlal Bahuguna	Medha Patkar	Dr. Raje
55	Village in Maharashtra which is famous for water conservation is _____.	Hiware Bazaar	Chandur Bazaar	Talegaon	None of
56	Desalination is a method of	converting waste water into potable water	converting rainwater into potable water	converting sea water into potable water	none of
57	Hardness of water is due to the presence of _____ of calcium and magnesium. a) chlorides b) sulphates c) carbonates	a and b	b and c	a and c	a, b and
58	Nalgonda Technique is used to remove excess _____ from water.	Salts	Chlorides	Fluorides	Sulphat

59	As per MPCB norms of treated sewage, the total suspended solids(TSS) in treated sewage should be less than ____ for discharging into surface water.	50 mg/l	100 mg/l	150 mg/l	200 mg
60	As per noise standards, the noise level for hospitals is ____.	20-30 dB	30-40 dB	40-50 dB	50-60 d
61	The quantity of fluorides in drinking water should not be more than ____ ppm	1	2	1.5	2.5
62	CPCB stands for	Control Pollution Causing Board	Central Pollution Collection Board	Central Pollution Control Board	Control Conserv
63	The presence of substance in the environment which has harmful or poisonous effect is called	biodiversity	pollution	ecological balance	none of
64	Pollution causes ____.	loss of fertile soil	loss of human lives	loss of marine lives	all of th
65	Anthropogenic source of pollution is	acid rain	use of chemical fertiliser	earthquakes	all of th
66	The effluent from sewage treatment plants can be reused for ____.	washing cars	watering lawn	flushing	all of th
67	____ is not a cause of land pollution.	Pesticides	Waste disposal on land	Deforestation	None o
68	Introduction of dangerous chemicals into the ground is due to	industrial waste disposal	domestic waste disposal on land	overwatering	none of
69	Dumping of solid waste leads to ____ pollution.	soil	water	both	none
70	____ is a natural source of soil pollution.	acid rain	construction activity	excessive use of pesticides	none of

Unit - V Environmental Legislation & Sustainable practices

1	The Acronym MPCB stands for	Municipal Pollution Control Board	Maharashtra Pollution Control Bureau	MadhyaPradesh Pollution Control Borad	Mahara Control
2	The acronym CPCB stands for	Chennai Pollution Control Board	Central Pollution Control Bureau	Centarl Pollution Control Borad	Common Control
3	The Acronym WCED stands for	World Chemical Energy Development	Wild Commission on Environment Development	World Commission for Empowerment and Development	World C Environ Develop

4	"to protect and improve the natural environment including forests, lakes, rivers and wild life, and to have compassion for living creatures" this statement belongs to article	51A (g)	51A (h)	51-A	52-B
5	"Protection and improvement of environment and safeguarding of forests and wild life The State shall endeavor to protect and improve the environment and to safeguard the forests and wild life of the country" is statement of which article in constitution of India?	48D	48C	48A	48B
6	The movement of water during hydrological process of recharge of ground water is from	Surface to reservoir	Underground to surface	Surface to underground	Underg
7	Damanganga-Pinjal Link is a	Dam	Interlinking of rivers	Hydro power plant	Highwa
8	_____ act was enacted in 1977.	Water Pollution act	The Water (Prevention and Control of Pollution) Act	The Water (Prevention and Control of Pollution) Cess Act	None of
9	MPCB is entitled to collect which of the following samples in Maharashtra	Air Pollutant	Water Pollutant	hazardous waste	All of A
10	Responsibility of CPCB includes abatement and control of pollution in the country by	generating relevant data	providing scientific information	rendering technical inputs for formation of national policies and programs	All of A
11	Which one of these air pollutants is not monitored under NAMP by CPCB	NO2	SO2	RSPM	CH4
12	Target group for formal education is	Children and youth	Farmer	Workers in unorganized sector	Elderly of free t
13	Target group for informal Education	Children and youth	Educated and employed	Uneducated Workers	All of th
14	Feature of formal education is	Education as a Full time and Primary activity	Education as a Parttime and secondary activity	Education during Vacation	Educati activity
15	The feature of informal education is	Full time education	Part time education	Education as day scholar in school	Educati school

16	The NGO with which Dr. Salim Ali is associated with is	Green peace	Bombay Natural History Society (BNHS)	Kaya	Urja
17	Which domain of the 7th five year plan made the provision of the protection of environment?	Environment Protection Act, 1986	Indian Forest Act, 1927	Wildlife Protection Act, 1972	National 1988
18	The Ministry of Environment and Forests is a nodal agency of _____ Government?	The State	The central Government	District Authority	Municipal
19	When was Indian Forest Act enacted?	1910	1911	1926	1927
20	Which act was enacted in 1972 to protect of plants and animal species in India?	Indian Forest Act	Wildlife Protection Act	Environmental Act	Natural
21	World water day is observed on _____ every year.	22-Mar	23-Mar	25-May	02-Oct
22	Which process among the following refers to accumulation and storage of rain water for reuse?	Rain collection	Rainwater harvesting	Rain digging	Rain water
23	World environment day falls on	05-Jul	05-Jun	05-Jan	05-May
24	The data for generation of Environmental inventory is	Primary Data	Secondary Data	Tertiary Data	Primary Data
25	As per national ambient air quality standards, the concentration of Sulphur Dioxide in industrial area should be within _____ micro gram/cubic metre.	50	100	150	200
26	As per national ambient air quality standards, the concentration of Nitrogen Dioxide in industrial area should be within _____ micro gram/cubic metre.	20	40	100	None of
27	Vertical farmig systems are commonly used to grow	Only fruits	Crops in soil rich environments	A variety of crops such as leafy greens, herbs and vegetables in stacked layers	Only flowers for decoration
28	Which technology is commonly used in solar desalination plants to convert sea water into fresh water	Reverse osmosis	Electrodialysis	Solar stills	Water conservation

29	One of the main advantages of green architecture is its ability to	Use synthetic building materials	Optimize natural light, reduce energy consumption and enhance indoor air quality	Replace traditional buildings with large concrete structure.	Increase use of fossil fuels in construction
30	Hydroponics is a method of growing plants without soil. Which of the following is main component in hydroponics systems?	Sand	Air	Nutrient rich water	Organic matter
